Week ending 9/8

Accomplishment - I was able to Download Virualbox and create a google sheet organizing the due dates for the courses I'm enrolled in this semester.

Challenge - I fell behind due to the CentOs filesharing problem. So, a big challenge was catching up due to the time I spent trying to solve this. Also, I had downloaded the wrong version and had to redownload and ran into a few other problems liks installing CentOs and Ubuntu with a GUI instead of the the command line only server.

Week ending 9/15

Accomplishment - I started working on the Grep Lab which I found fun and was fascinated at the SmarTTY software for this lab

Challenge - I was having trouble with 3 of the questions on the lab which took a while since I had to use resources from the professor's previous class and find articles/videos to help me out. I'm still stuck on the file sharing aspect and having trouble with filesharing between windows and centos, getting host not found error. This caused me to fall behind as I was trying to troubleshoot the issue.

Week ending 9/22

Accomplishment - I was able to learn more about Sed and complete the lab. I actually had the chance to learn more about other linux commands besides Sed by reading numerous articles and watching videos when I was working on the assignment to understand how it works.

Challenge - The last question on the lab was challenging for me because after I wrote the commands in the script file it wasn't running and I kept having to research on how to fix it, I was also getting an error message about "3 extra characters at the last line" after looking that up I was able to fix the problem and the script worked out fine. Also, question #8 is tricky as well. I'm still stuck on filesharing between CentOs and my windows machine.

Week ending 9/29

Accomplishment - I was able to learn about awk which I've ever learned about before and was able to challenge myself by testing out what commands work and what doesn't

Challenge - Some challenges I had with the Awk lab was trying to print only the last names, printing out only the first names but I was able to solve the problems by using split and checking the syntax. Also, I'm still working on trying to figure out my filesharing CentOS situation.

Week ending 10/6

Accomplishment - Worked on my Awk Lab and started to brainstorm on what I wanted on my portfolio.

Challenge - Realizing I didn't have my work from my previous courses to display on my portfolio, also being behind on my other labs and the centos filesharing.

Week ending 10/13

Accomplishment - Finishing my awk lab and my portfolio, also I did create a pretty decent Github that I'm proud of (so far).

Challenge - Figuring out how to use github and trying to create a website, then figuring out what I want to put on my portfolio.

Week ending 10/20

Accomplishment - Was able to fix my awk and sed lab and finish the final submission for my midterm video.

Challenge - had some trouble with the awk script, and I had some problems with one of the problems on the sed lab. Also, trying to figure out how to approach the rest of the semester with some technical difficulties.

Week ending 10/27

Accomplishment - Started working on Setup part 2

Challenge - Was having trouble with some things including repos

Week ending 11/3

Accomplishment - Continued doing the setup,

Challenge - I had to go back and fix some things like adding the dates to the screenshot using the date command.

Week ending 11/10

Accomplishment - Finished set up part 2 and created a splunk account

Challenge - Had some issues with Splunk and reached out to their customer service team numerous times to fix the issues

Week ending 11/17

Accomplishment - Was able to get splunk set up. Also, started working on my containers lab

Challenge - For containers, I ran into some issues with downloading some programs and configuring it, I will continue to resolve it. As for Splunk, I had some issues accessing the Lab servers.

Week ending 11/24

Accomplishment - I was able to get most of my splunk labs done, my goal is to submit the two labs by monday, then work on my containers lab and see if I have enough time to complete other labs for a better grade.

Challenge - Getting booted from the Splunk servers and not being able to access the lab servers. Also, I had some trouble with trying to start my scripting labs(decied to hold off on it for now)

Week ending 12/1

Accomplishment - An accomplishment was finishing up the splunk labs

Challenge - I had some problems with the splunk labs because I skipped a step or the lab server was not cooperating with me. Also, I had some issues with installing Docker on Ubuntu. Also, running into some issues with minikube, lots of troubleshooting...

Week ending 12/8

Accomplishment - I was able to successfully install docker, kubernetes, minikube and troubleshoot the problems I kept running into.

Challenge - The challenges with the containers lab and it holding me back from working on my portfolio and final presentation. Also, I ran into some issues with yaml containers.
